DESCRIPTION
The ALT-L Series End of Circuit Light Kit is constructed of aluminum. For use with all versions of LT, CLT, HLT and NC heater cables. Compatible for use with any vendor’s heater cables smaller than 11mm (.44”) diameter.

KIT CONTENTS
1 Junction Box 
1 Conduit Locknut 
1 Sealing Grommet 
1 Stand-off 
1 Ground Screw 
1 Light Assembly 
1 Caution Label

1 Power Termination 
1 Box Adapter 
1 Gasket 
1 Tube of Silicone 
2 Pipe Clamps 
1 Piece of Shrink Tube

Voltage | Kit Cat. #
--- | ---
120V | ALT-L120
208V | ALT-L208
240V | ALT-L240
277V | ALT-L277

Note: For internal grounding of braid see sheet 8.

⚠️ WARNING:
Article 427-22 of the National Electrical Code requires that all heaters shall have metal coverings and be provided with branch circuit ground-fault protection.
STAND-OFF POSITIONING

1. Mark pipe where stand-off will be mounted.

3. Slide the sealing grommet over the heater cable and position inside stand-off opening:
   - **for Braided “CB” Products:** See “Grommet Installation for Braided “CB” Products”, sheet 3.
   - **for Overjacket “J” or “JT” Products** Proceed with step 4 below.

4. Apply silicone around the heater cable on top of the sealing grommet and fill any voids in sealing grommet.
5. Slide the box adapter over the heater cable and tighten securely to stand-off.
6. Prepare heater cable for power termination:
   - for Braided “CB” Products, see sheet 3.
   - for Overjacket “J” or “JT” Products, see sheet 4.
7. Terminate heater cable, see sheet 7.

**WARNING:**
Do not place pipe clamps over the heater cable.
SEALING GROMMET INSTALLATION FOR BRAIDED “CB” PRODUCTS

1. Slide braid back, allowing at least 13mm (.5”) of heater cable exposed.
2. Cut and remove 13mm (.5”) of heater cable.
3. Slide braid back over heater cable and twist excess braid into a pigtail.
4. Slide the sealing grommet over the heater cable and position inside stand-off opening.
5. Continue with step 4 on sheet 2.

BRAIDED “CB” PRODUCTS

1. Secure cable braid with fiberglass tape.
2. Slide braid back 127mm (5”) to create a bulge.
3. At the bulge, separate the braid to make an opening.
4. While bending the heater cable, work it through the braid opening.
5. Pull the braid tight,
6. Proceed to “LT, CLT & HLT Products”, sheet 5
OVERJACKET “J” or “JT” PRODUCTS

1. Lightly cut around cable overjacket 127mm (5") from the end. Bend cable to break the overjacket.
2. Lightly cut overjacket up the center between first cut mark and the cable end. Bend cable to break the overjacket.
3. Remove overjacket from heater cable.
4. Move braid back toward the overjacket, creating a bulge.
5. At the bulge, separate the braid to make an opening.
6. While bending the heater cable, work it through the braid opening.
7. Pull the braid tight.

WARNING:
DO NOT CUT BRAID
FOR ALL NELSON LT, CLT & HLT PRODUCTS
(See sheet 6 for an alternate stripping method for HLT products.)

1. Lightly cut around cable outer jacket 102mm (4") from the end. Bend cable to break outer jacket.
2. Lightly cut the outer jacket up the center between the first cut mark & the cable end. Bend cable to break outer jacket.
3. Remove the jacket from the heater cable.
4. Shave the core material from the outside of each bus wire.
5. Starting at the end, pull each bus wire away from the core material.
6. Remove exposed core material.
7. Cut 6mm (0.25") off the end of each bus wire.

⚠️ WARNING: DO NOT CUT BUS WIRES
1. Lightly cut around cable outer jacket 102mm (4") from the end. Bend cable to break outer jacket.
2. Lightly cut the outer jacket up the center between the first cut mark & the cable end. Bend cable to break outer jacket.
3. Starting at the end, in the same plane as the cable, pull each bus wire away from the core material.
4. Remove the jacket from the heater cable.
5. Remove the exposed core material.
6. Make a cut inside each bus wire.
7. Remove the remaining core material off the outside of each bus wire.
8. Cut 6mm (0.25") off the end of each bus wire.
POWER TERMINATION

⚠️ WARNING:
Bus wires must not touch or cross while inserting into power termination.

1. Insert bus wires into power termination.
2. Squeeze power termination opening and fill with silicone.
3. Push power termination to overlap jacket.
4. The silicone will set up in about 30 minutes with a complete cure after 24 hours.
ELECTRICAL CONNECTION

Note: This detail shows internal grounding of braid.

1. Place gasket onto the box adapter.
2. Position junction box onto the box adapter and secure it with the conduit locknut.
3. Place the two black compensating gaskets onto the light assembly base.
4. Insert power wires into screw connection of light assembly.
5. Slide piece of shrink tube over ground braid.
6. Connect ground braid to the ground screw inside the junction box. See diagram above.
7. Place the box cover onto the light assembly then install the clear trim washer and secure it with the ring nut.
8. Secure the box cover onto the junction box.

Nelson Heat Tracing Systems products are supplied with a limited warranty. Complete Terms and Conditions may be found on Nelson's website at www.nelsonheaters.com.
